Company Profile

ICEX

TECHNOLOGY REPURPOSING

WHAT WE CAN DO FOR YOU

ICEX was established over 16 years ago because its founders understood the long-term impact that incorrectly disposing of re-useable technology would have on the environment, and that technology was still of use in other business or home user environments. We set out to create a solution that allowed businesses to be able to re-purpose their assets securely and sustainably, mitigating risk when it came to data breaches, and additionally releasing potential residual value from some of their items where applicable.

16 years on, ICEX now provide one of the safest and most simplistic disposal services allowing you to feel confident that your decisions around asset disposal will help to build a more sustainable future, while being able to demonstrate internally to your peers and superiors that you have done your due diligence in selecting one of the most secure partners for asset disposal, and done your bit to bring additional revenue back to the business to assist balancing ever demanding IT budgets.

ABOUT US

ICEX provides ultra-secure data destruction both on and off-site along with a range of other services to take care of safe disposal of data. We are ISO 9001, 14001 and 27001 compliant. We operate with the highest level of information security with the ISO 27001 certification, which requires an effective information security management system. We invest lots of time adhering to and maintaining these standards so that you can have absolute confidence in our services. Furthermore, we follow the government information assurance scheme Cyber Essentials operated by the National Cyber Security Centre (NCSC) that encourages organisations to adopt good practice in information security.

OUR EXPERTISE

We can help your business overcome the problems and risks that result from the need to recycle, renew or refresh IT. Whatever your restraints – financial, space, access, information governance, resources or simply a tight deadline – we provide innovative solutions that work.

WHAT DOES THIS MEAN FOR YOU?

• Environmental/Sustainability

• Secure and environmentally responsible disposals.

• The Waste Electrical and Electronic Equipment Directive (WEEE) sets out legislation for the disposal of all types of e-waste and electrical items.

• Two million tonnes of WEEE were disposed of in the UK during 2015. 800,000 tonnes were made up of large items such as white goods. 1.2 million tonnes of electrical waste are divided between smaller household items and commercial waste. Redundant IT equipment makes up a large amount of this waste.

• ICEX provides secure and certified IT disposal processes, utilising both digital and physical sanitisation procedures. We can give office equipment the chance to be repurposed.

• Since 2014 56% of IT equipment that ICEX has processed has been repurposed. Anything that cannot be reused is processed through the correct disposal channels following hazardous waste disposal guidelines and we guarantee that nothing goes to landfill.

• Information Security – Certificates /Accreditations

• At ICEX, securely processing data holding equipment is the life-blood of our operation and is key to all of our service offerings. Whether it is PC, laptop, server, tablet, printer, fax, photocopier or smart phone recycling, we help our clients by ensuring that all the data has been destroyed.

• It doesn't matter whether that data is stored on magnetic media, we can wipe hard drives and tapes and destroy data on optical media such as CDs and DVDs, or solid-state media such as drives and flash memory.

• Data Destruction

• At ICEX we use a variety of techniques to securely remove and destroy the data held on all media types, to best suit your risk profile and budget. You can rest assured that our expert advisors will give you the appropriate information to help you make the best choices for your business.

• Since the formal launch of the GDPR, ICEX has experienced an increased number of enquiries coming in due to our accreditations around secure data disposal. ICEX can help you by averting any risk of fines that would arise from data breaches. We are a suitable partner for processing equipment at end of life due to our high standards of operating and the accreditations we have invested in achieving.

OUR EXPERTISE

WHAT DOES THIS MEAN FOR YOU?

• Rebates & Repurposing

• We also provide a repurposing service for which currently we see almost two thirds of everything we take in being repurposed and resold for use elsewhere (the rest is recycled with nothing going to landfill). In many cases we are able to offer our customers rebates back on the equipment that still has value such as laptops and PCs and networking equipment. Naturally with the way things are economically we get a lot of interest in this from the public sector.

• With our IT remarketing processes ICEX can make substantial annual savings for a business by reselling redundant IT assets, helping to offset some of the costs incurred in buying new equipment IT resale of sanitised equipment.

• Our specialist team ensures that each item entering our facility is thoroughly tested for quality assurance and function. Equipment that meets our high standards will be fixed or improved with new parts to then be sold.

• We work with an open book policy with our clients to remarket your IT, once the costs for data cleansing, servicing and repairing equipment have been covered. We profit share any residual money, neutralising our charges and returning some value on a client's redundant IT.

SERVICES OFFERED

SERVICES OFFERED

- **Collections**
- **Recycling**
- **Remarketing**
- **On-site or Off-site**
- **Data Destruction**
- **Data Erasure**
- **Hard Drive Shredding**

ASSETS COVERED

We cover most electronic items including data holding and non-data holding equipment. Including but not limited to:

- **PCs • Laptops • Servers**
- **Networking equipment**
  (including switches and firewalls)
- **Printers**
- **Mobiles Phones & Tablets**
- **TFT Monitors**
- **Storage devices**
  (including Hard Drives & Solid-State Drives)

OUR PROCESS

Get a Quote

Get in touch with us by phone or email with details of the IT Assets you want to dispose of. We will give you friendly 'no obligation' advice and a free quote.

IT Asset Management

We take care of the entire IT asset management process: collection, onsite services, data disposal / destruction, reuse, resale and full audit trail.

Tracked Collections

Our modern fleet of GPS tracked vehicles with DBS checked drivers provide you with a flexible, secure and reliable collection service.

Secure Asset Disposal

At our licensed recycling facility, we thoroughly test the equipment. Hard drives are wiped and prepared for recycling or securely destroyed.

Certification Documents

When the job is complete, we provide a final inventory report, data destruction certificates and residual equipment values are processed
